

Manyata

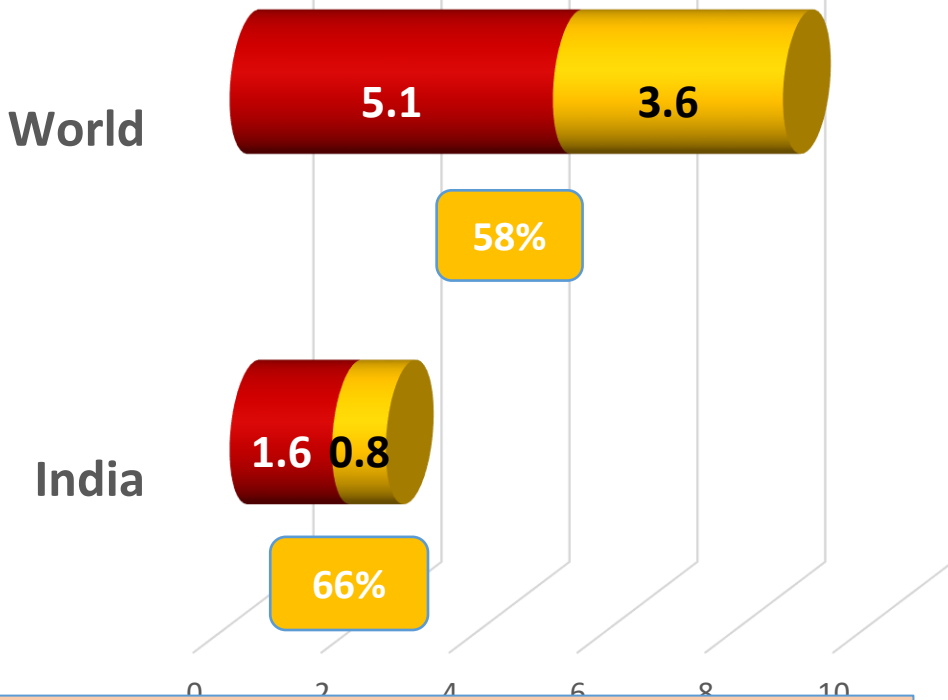

An initiative for assuring quality of care
in private sector facilities providing
maternity services in India

Why Manyata?

Manyata is a Quality of Care program for intrapartum and immediate postpartum care in India for the private sector.

■ Deaths due to poor quality of care

■ Deaths due to lack of access to healthcare services

Source: Mortality due to low-quality health systems in the universal health coverage era: a systematic analysis of amenable deaths in 137 countries. Lancet. 2018 Nov 17;392(10160):2203-2212.

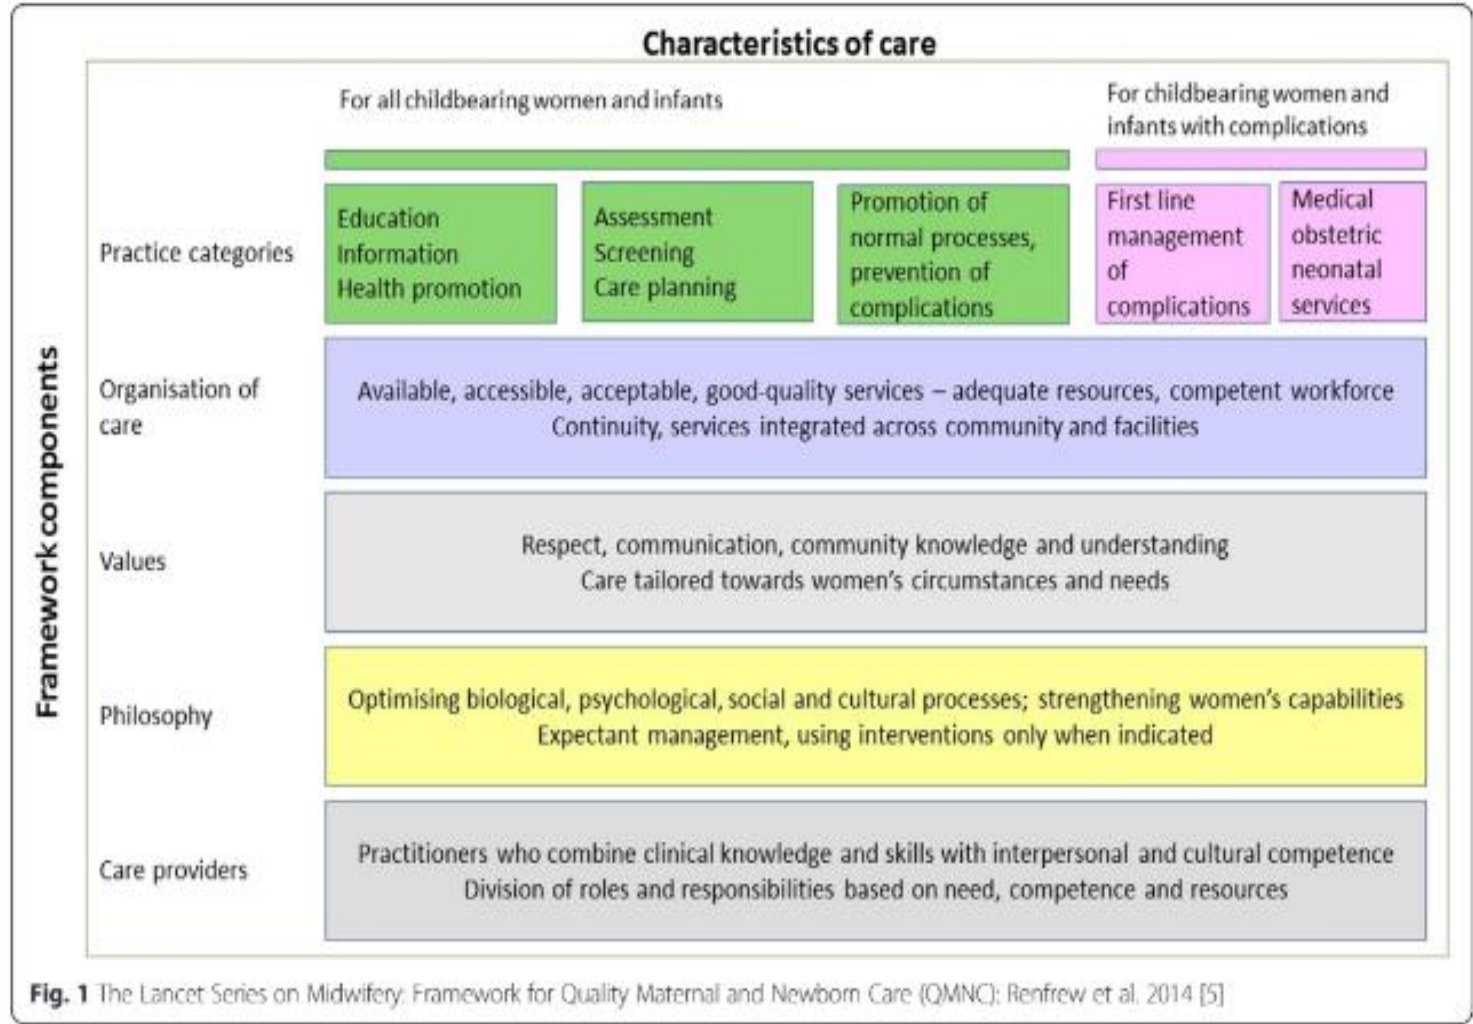

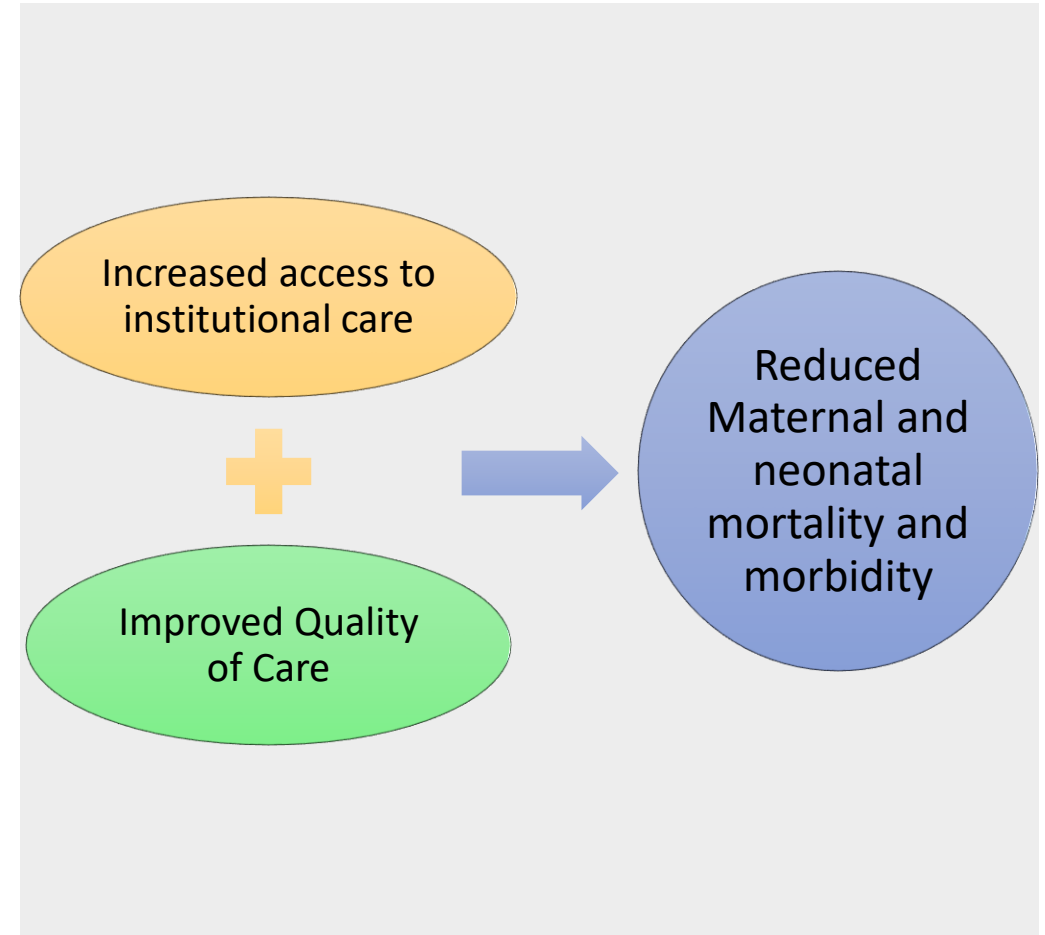

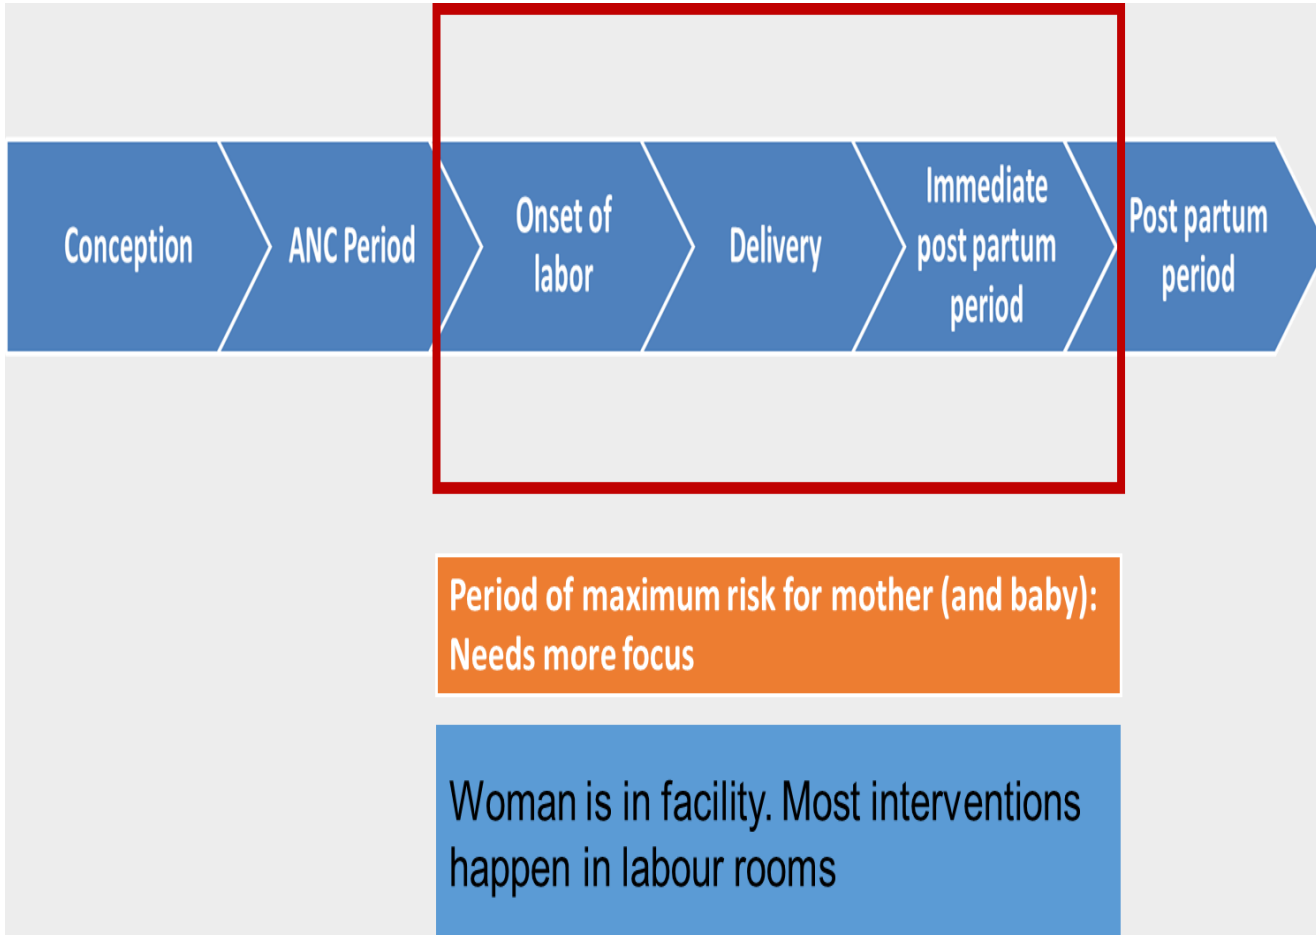

Fig. 1 The Lancet Series on Midwifery: Framework for Quality Maternal and Newborn Care (QMNC); Renfrew et al. 2014 [5]

1

Better quality of care at childbirth could avert up to 1.49 million maternal and newborn deaths and stillbirths annually and significantly improve maternal and newborn survival

2

Most maternal and neonatal mortality is centred around delivery (intra and immediate postpartum period)

Why India

- India accounts for 17% of Global maternal death
- Increase in Institutional delivery did not translate to proportionately decline in mortality
- Quality in institutions is key

Why private sector

- 36.8% of institutional births are in the private sector
- Quality in maternal care in the private sector is sub-optimal contrary to popular belief
- Unlike public sector, there are no focused efforts on improving quality of maternity care in private sector

What is Manyata?

Manyata is a seal of quality

The
Branding

Manyata is a certification (accreditation mechanism)

The QA
component

Manyata is a mechanism to achieve quality

The QI
component

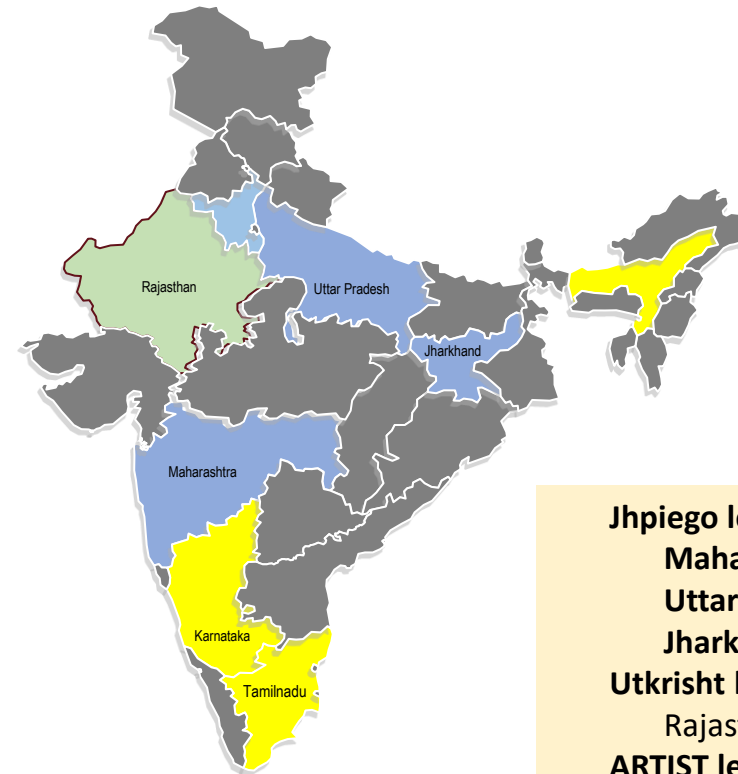

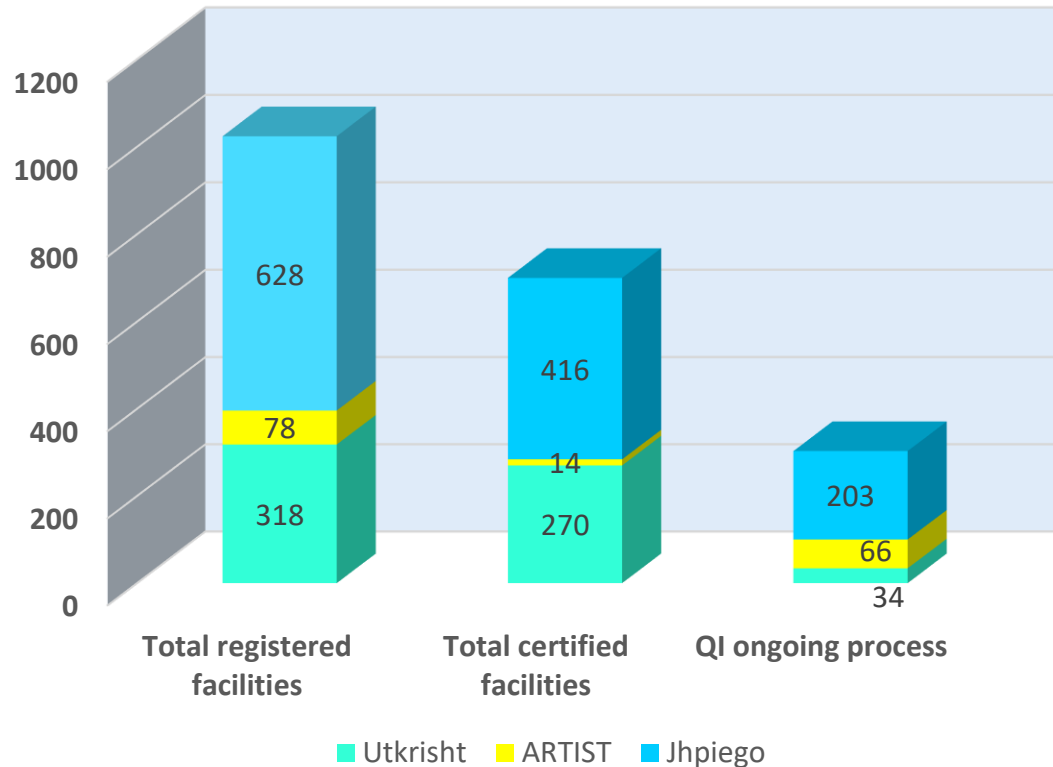

Manyata is a community of practitioners that strive for Quality

The Quality
'movement'

Manyata – the scale

probably the largest private sector Quality Improvement program in the world

Distribution of facilities in Manyata since Phase I -
March 2016 till Phase III-July 2020

Key learnings from Manyata

1 Codified quality into standards for practice

16 standards for clinical practice

- Created these standards with FOGSI and the Government of India

10 standards for facility systems

- Created these standards with FOGSI and Government of Maharashtra

2 Clinical competency and skill building

Integrated team based trainings –
Low dose but high frequency

Clinical: Skills and Drills for all staff

Integrating respect, dignity with
quality

Innovative use of digital technology
and skills labs

Picture of
training

3 Building quality management system

Engage with management: Problem solving approach

Establishing Standard Operating Procedures for clinical processes and safety

Ensuring adequate resources through checklists and inventory management

Better case records and documentation

Institutionalizing quality circles

Picture of mentoring

3 Building quality management system

4 Establishing a certification process

Assessments	Certification	Continuous reporting	Picture of assessment
<ul style="list-style-type: none">• Peer clinician• Peer + Government	<ul style="list-style-type: none">• FOGSI led• Encouraged to self report standards every quarter	<ul style="list-style-type: none">• Facilities encouraged to report quarterly on standards	

4 Sustaining quality through market approaches

- QI through a lean system
- QI done through peer support by FOGSI champions
- QI done through a paid module

**Sustainable
QI**

- Certification has a meta-regulator seal (government / NABH)
- Advocating for meta-regulator to take over QA

**Sustainable
QA**

assessment

What have we achieved in Manyata?

Better quality of care

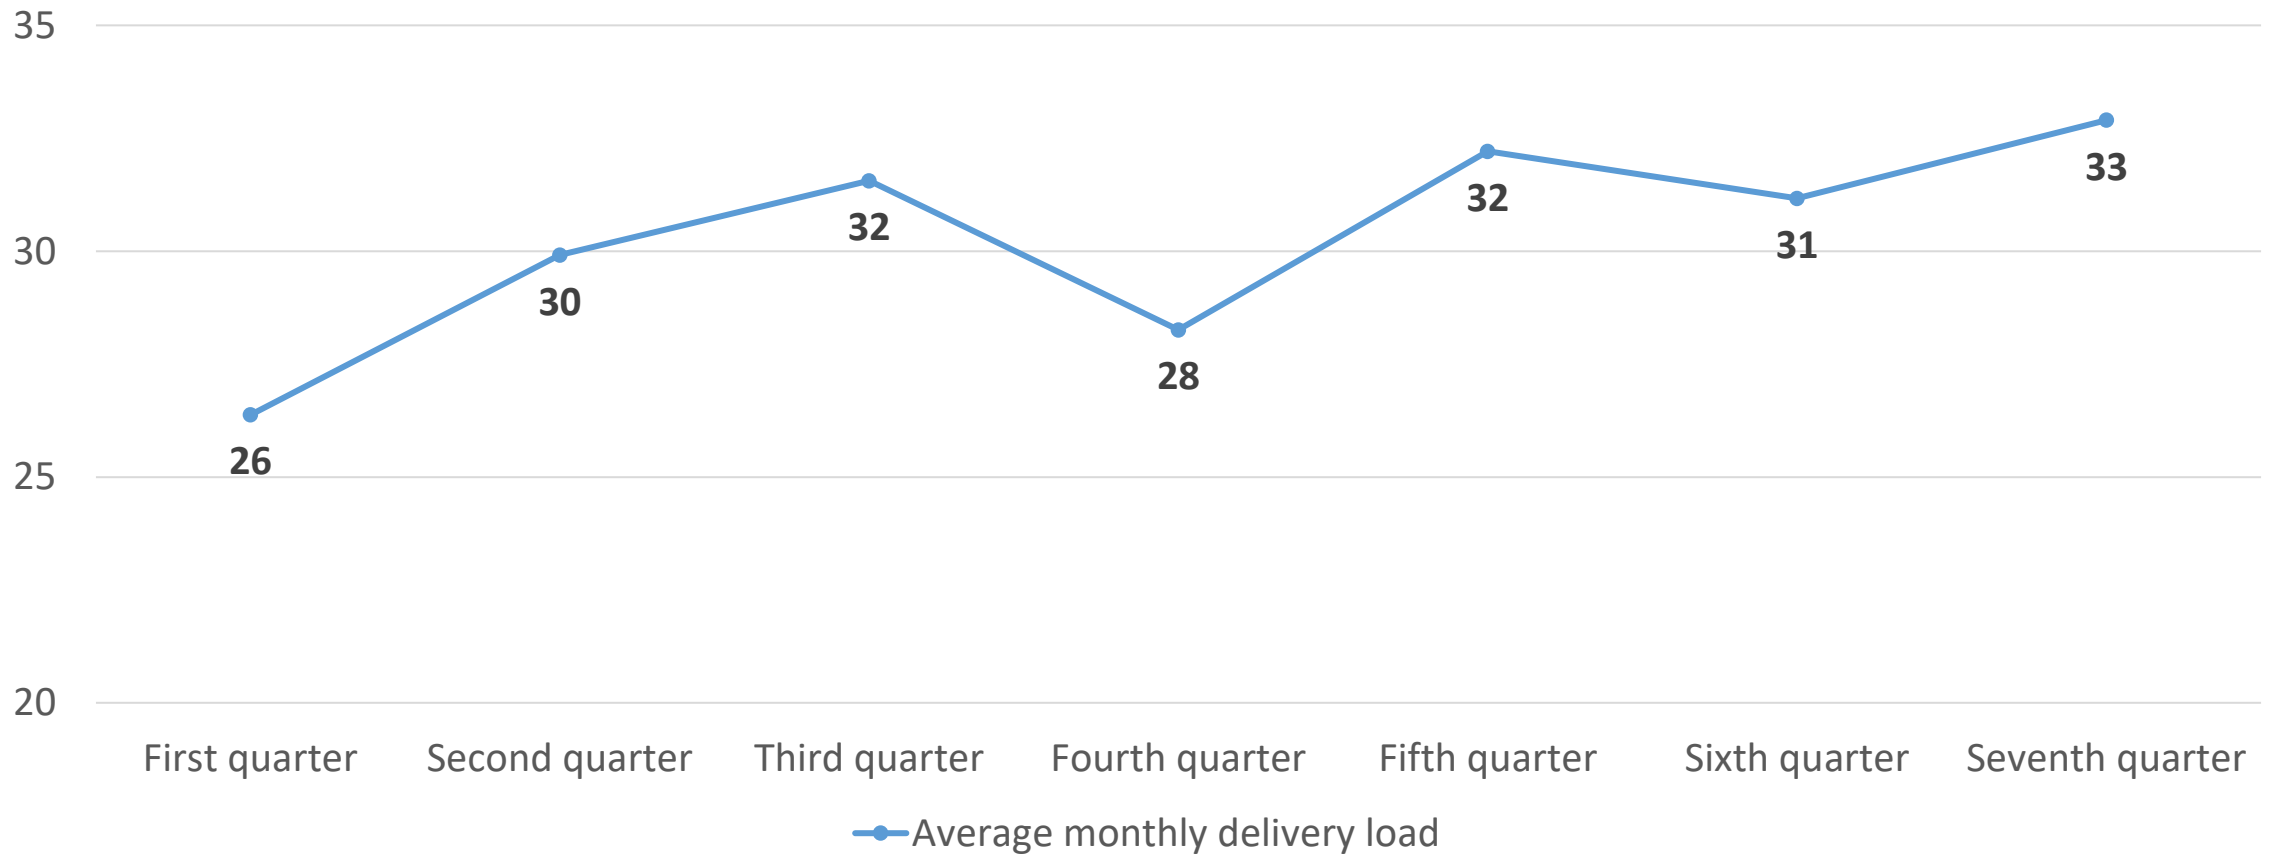

Reduced adverse outcomes

Greater footfall

1. Greater footfalls (average monthly delivery load)

27% increase

2. Better Quality of Care

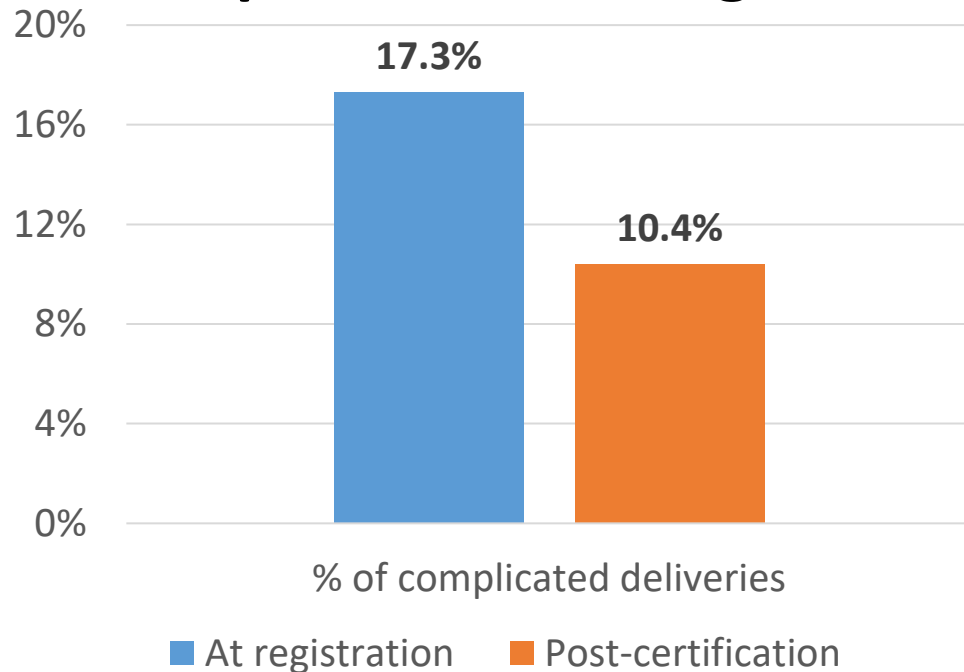

Better Quality of Care (...cont'd)

3. Reduced Adverse Outcomes

Complications during childbirth

40% reduction

Stillbirth rate (SBR)

29% reduction
